THE HISTORY OF

DETACHMENT 2, 6994TH SECURITY SQUADRON

1 JULY 1972 - 31 DECEMBER 1972

RGS: USS-D3

1 JANUARY 1973

Detachment 2, 6994th Security Squadron, APO San Francisco 96337

HISTORY OF DETACHMENT 2

6994 Security Squadron

1 July 1972 through 31 December 1972

RCS: USS-D3

Patrick D. Rife, Captain, USAF Commander This operational history of Detachment 2, 6994 Security Squadron is a narrative depicting the significant Detachment accomplishments during the historical period 1 July 1972 thru 31 December 1972.

This history was prepared by Master Sergeant Carl A.

Miller, who was assisted by SSgt Jerome E. Johnson and SSgt
Robert C. Saunderson. Additionally, credit is due all

Detachment 2 Staff Elements who provided valuable and timely
inputs. This history is subject to revision, and all comments
and suggestions are welcomed and should be directed to the

Operations Officer, Detachment 2, 699h Security Squadron,

APO San Francisco 96337.

### USS-D3

27 August 1972 Detachment 2 was visited by the 6994 Security Squadron Standardization/Evaluation Team. 2 September 1972 ECON-2 declared and 13 EC-h7 aircraft and 46 Detachment 2, personnel evacuated to Tan Son Nhut Air Base, RVN when the Dallang area was threatened by Typhoon Elsie. 14 September 1972 ECON=2 declared and 12 EC-47 aircraft and 11 Detachment 2 personnel evacuated to Tan Son Nhut Air Base RVN, when the DaNang area was again threatened by Typhoon Flossie. 14 September 1972 Detachment 2 was visited by USAFSS Standardization/Evaluation Team. 23 September 1972 "Rocket Attack": 28, 122MM rockets impacted on DaNang Airfield, no damage to Detachment 2 facilities. 24 September 1972 Detachment 2 and specific flying personnel were cited in congratulatory messages from SSO MACV for intercepting and fixing a very desirable Special Emphasis target. "Rocket Attack": 5, 122MM rockets impacted 27 September 1972 on DaNang Airfield. Six EC-47 Aircraft received light damage.

28 September 1972 First revision to the Detachments

FY-73 budget was forwarded to the budget

officer.

5 October 1972 One EC-47 Aircraft, 3882, received damage

from ground fire, while returning from an

ARDF Mission.

25 October 1972 "Rocket Attack": 19, 122M rockets impacted

on DaNang Airfield, no damage to Detachment

2 facilities.

28 October 1972 "Rocket Attack": 27, 122MM rockets impacted

on Danang Airfield. One H-1 Van received

75 holes, one H-1 Van received four holes

and one building received damage in the

Detachment 2 operations area.

29 October 1972 7AF gave approval for immediate implementation

of the revised Black Bear Program.

7 November 1972 Detachment provided maintenance manning

assistance to Detachment 3, NKP, Thailand.

7 November 1972 ECON-2 declared and 12 EC-17 aircraft and

38 Detachment 2 personnel evacuated to

Nakhon Phanom, RTAFB, Thailand when the

Dawang area was threatened by Typhoon Pamela.

"Rocket Attack": 9, 122MM rockets impacted 18 November 1972 on DaNang Airfield, no damage to Detachment 2 facilities. "Rocket Attack": 7, 122MM rockets impacted 20 November 1972 on Dawang Airfield, no damage to Detachment 2 facilities. First Vietnamese Familiarization Flight from 21 November 1972 DaNang Airfield. The first of six EC-47 aircraft, with a 30 November 1972 Detachment 2 back-end crew, departed DaWang for Ubon RTAFB, Thailand to establish Detachment 3, 6994 Security Squadron. The remainder of Detachment 2 personnel 31 November 1972 departed for Ubon RTAFB, Thailand to establish Detachment 3. Captain Patrick D. Rife assumed Command of 16 December 1972 Detachment 2, 6994 Security Squadron. The personnel of Detachment 2, along with 25 December 1972 the rest of personnel assigned DaNang Airfield, celebrated Christmas, by orders of

the 6498 ABWg Commander.

USS-D3

26 December 1972

"Rocket Attack": 32, 122MM rockets impacted

on DaNang Airfield, no damage to Detachment

2 facilities.

28 December 1972

"Rocket Attack": 30, 122M rockets fell short of DaNang Airfield and impacted in DaNang City.

### CHAPTER I

### MISSION AND ORGANIZATION

### MISSION

Detachment 2, 699h Security Squadron continued as an element of the United States Air Force Security Service contingent, tasked with Airborne Radio Direction Finding (ARDF) and Airborne Communications Intelligence (ACI) collection in South East Asia (SEA). The Detachment, directly subordinate to the 699h Security Squadron, Tan Son Nhut Airfield, Republic of Vietnam, performed the unique mission of providing timely ARDF fixes on enemy locations to both Army and Air Force tactical units, thereby allowing for timely targeting against the enemy.

### Mission

Detachment 2, 6994 Security Squadron was located at DaNang Airfield, Republic of Vietnam. The operational mission of the Detachment was to conduct ARDF and ACI against enemy targets in the SEA Areas seven, eight and nine. The ARDF and ACI missions were accomplished in a fleet of 15 EC-47 Aircraft. Nine of the Aircraft were AIR-35 CCZ configured, three were AIR-38 CCZ and three were AIR-35 CC. The aircraft were under the control of the 362nd Tactical Electronic Warfare Squadron (TEWS).

\* After 1 Dec, Det 2 had only 10 ALR-34 equipped EC-47's.

### Organization

Within the USAFSS structure, the Commander 6994 Security Squadron, Tan Son Nhut Airfield, RVN, exercised command supervision and administrative control of Detachment 2. The Commander Seventh Air Force (7AF) maintained command control of the EC-47 fleet, through the 362nd TEWS, at DaWang Airfield, RVN.

The operational control and utilization of the AHDF and ACI facilities was vested in the Military Assistance Command, Vietnam (MACV). The MACV requirements were routed through the AHDF Coordination Center (ACC), operated jointly by the 509th Radio Research Group (RRG) and the 699th Security Squadron in accordance with MACV Directive 381-23. Specific targets of interest were selected by the tactical commanders and tasked through the ACC. ACC subsequently tasked the detachment, while technical support was provided by the appropriate Collection Management Authority (CMA).

Internal Organizational Structure

(U) As with the majority of USAFSS units, Detachment 2 6994 Security Squadron consisted of command function, Operations Division, Logistical Support, and various other supporting sections, including Communications, Personnel, Administration, and Security and Law Enforcement. The Operations Division was

USS-D3

sub-divided into eight separate sections with designation and duties as follows:

3

### Flight Operations

Airborne Morse Systems Operator element which was divided into two Operational Flights. This element included the majority of the Detachments Airborne Morse Systems Operators and its primary function was to insure that the crew composure conformed to the mission requirements and aircraft configuration.

Mission Management

Management Information Summary (DURMIS), and the Aviation Unit
Daily Status Report were the primary functions of the Airborne
Mission Management Section. The DURMIS is a vehicle for apprais—
ing all concerned at all levels of command of the daily activities
of the unit. The Aviation Unit Daily Status Report was utilized
in accomplishing the daily mission, and a remarks section
which commented upon the problems encountered and their effect
on mission accomplishment. Issuing Position Status Reports (PSR),
monitoring mission accomplishment, preparation of evaluations
and statistical studies to discern trends in production and
the control and issuing of mission kits which contained the

operator aids and data necessary for the accomplishment of the ARDF and ACI mission, were also functions performed by this section.

# Standardization and Evaluation Flight Examiner Section (SEEE)

airborne mission. The Detachment's SEEE Section was responsible for monitoring the airborne operator progression, and insuring that the unit was in full compliance with all regulations and directives concerning airborne operations.

Additionally the section maintained all air crew member records and provided initial, semi-annual and no-notice check flights in accordance with USAFSSM 55-7 and 6994 Security Squadron Regulation 60-3.

### Airborne Voice Collection and Processing Section

This section performed two separate functions;
Airborne Voice Collection and Ground Processing and Reporting.
The section provided the Scheduling Section of Flight Operations with Airborne Voice Processing Specialists to accomplish the Airborne Collection effort while other Specialists of the Section accomplished the ground processing and submitted reports as required.

# Awards and Decorations

(U) This office was responsible for monitoring the flying activities of assigned personnel and assisting supervisors in the submission of recommendations for the award of appropriate decorations. Also, the section insured adherence to all governing directives associated with the award of various medals associated with the unit's mission.

### Analysis and Reporting Section

As in the case of the Airborne Voice Collection and Processing Section, this section performed two separate functions. The Airborne Analysts made on the spot identifications of target activity and by closely coordinating with the Airborne Mission Supervisor (AMS), ensured that proper attention was given the higher priority targets. The ground analysis and reporting section was responsible for the preparation of daily reports on all ARDF and ACI. The ground analysts also maintained a Data Base File and augmented the Technical Data List (TDL), received from the CMA, with locally extracted identification data to insure the best and most current identification aids aboard the mission aircraft.

# Ground Training Section

(U) The Ground Training Section monitored the upgrade

training for personnel in all Air Force Specialty Codes (AFSC) assigned to the Detachment, and conducted a course of instructions for all newly assigned Airborne Morse Systems Operators, Airborne Analysts, and Airborne Voice Processing Specialists. In October the section implemented two new training courses; Category IV, Airborne Mission Supervisor (AMS) Course, and Instructor Radio Operator (IRO) Course.\*

# Plans and Programs Section

Orders, including supporting Plans and Operational Orders, including supporting Plans and Operational Orders published by other agencies. Additionally, the Plans and Programs Section monitored the USAFSS Master Program, Program Action Directives (PADS), and Unit Detail Listing, submitting requests for changes and posting changes as required.

<sup>\*</sup> See Chapter V, page 20 this History

### CHAPTER II

# SIGINT TASKING AND COLLECTION

The Commander, MACV exercised operational control of the ARDF and ACI activities performed by Detachment 2, 6994 Security Squadron. The Director, National Security Agency (DIRNSA) exercised technical control of the assigned ARDF and ACI activities.

The Detachment was tasked with ARDF and ACI collection, processing and reporting of Southeast Asian Communist voice and morse communications in the High Frequency (HF) and the Very High Frequency (VHF) spectrum.

Messages (CONMSG) for each absolute area\* from the appropriate Collection Management Authority (CMA). These CONMSGs reflected the tasking generated at the weekly meeting of tactical commanders and other agencies at the ACC. The CMAs supported the mission by providing a Technical Data List (TDL) for those priority targets on which they held sufficient technical data to reasonably predict a schedule. The Detachment's analysis section supplemented the TDLs with current data taken from the locally developed

<sup>\*</sup> Each SEA Area is broken down into several absolute areas to allow for more specific tasking

Data Base File. The CMA tasked the airborne collection positions with only those specific targets which could not be effectively assigned to ground-based SIGINT collection units.

### Basic Mission

Scty Sq, staging from DaNang Airfield, RVN, was tasked with flying ARDF missions in SEA Areas 7,8 and 9 in South Vietnam. The primary objective of these missions was to obtain accurate locations, through ARDF, of Viet Cong (VC) and North Vietnamese Army (NVA) forces operating in South Vietnam. The secondary mission was to collect target communications data in order to derive exploitable intelligence. Det 2, 699h Scty Sq utilized two configurations of the EC+47, Combat Cross (CC) and Combat Cross Zulu (CCZ) in accomplishing its assigned mission.

The primary objective of the CC mission was to fix enemy target transmitters deemed priority targets by MACV. The CC aircraft were configured with two SIGINT positions; The ARDF position which was designated "X" and the target acquisition position which was designated "Y". The "X" position was manned by an Airborne Morse Systems Specialist and had the capability of fixing targets within a frequency range of 2 to 16 Megahertz (MHZ). The "Y" position, which was also manned by an Airborne Morse Systems Specialist, had the capability to monitor enemy transmissions within a frequency range of 2 to 30 MHZ. During

the fix operation the "Y" position provided supporting intercept copy on the target being DFed by the "X" position and when time permitted, performed a COMINT collection mission directed toward maximum continuity and development (C&D) of all hostile target transmitters.

also to fix enemy target transmitters deemed priority targets by MACV. The CCZ mission had a secondary objective of collecting voice and Manual Morse intelligence. This platform possessed two positions an addition to those found on the CC platform.

These two positions were designated "Zl" and "Z2". The "Z1" was normally utilized as a voice collection position while "Z2" was normally utilized for Manual Morse intercept. Both positions had HF/VHF capability with a frequency range from .2 to 90 MHZ. The AN/ALR-38 CCM platform had HF/VHF DF capability with a frequency range of 2 to 190 MHZ.

### Mission Accomplishment

During the period covered by this report,

Detachment 2 was tasked to fly 969 missions of which 882 were
accomplished. The Detachment was tasked with an average of 49
missions per week and had an average of three missions per week
unaccomplished. There were a number of reasons for unaccomplished
missions, but the two which contributed most were bad weather and
Maintenan

delivery involved the airframe maintenance. The Detachment was fragged to fly an average of 285 hours per week and an average of 236 hours was actually flown.

### ARDF Productivity

ARDF target productivity is depicted on a chart in Appendix VIII. The ratio of targets worked versus hours over showed a slight increase. Considering all missions, the Detachment worked an average of more than three targets per hour, and averaged fixing two targets per hour. The percentage of targets worked that were fixed was slightly lower (67%) than during previous periods, however, the number of targets worked that were cut increased considerably (21%). The overall effectiveness of the Detachments ARDF operations was considered outstanding in that 88% of all targets worked were located by an ARDF fix or cut.

# Airborne Communications Intelligence (ACI)

Radiotelephone (RT) remained somewhat stable. In the MM effort the Detachment was tasked with a total of 26,941 allocated minutes of copy (AMCC) and achieved a total copy time of 34,539 minutes, for an overall effective percentage of 13%. In the RT effort the AMCC was 107, 402 minutes with a total copy time of 22,889 for an overall effective percentage of 21.3%.

### CHAPTER III

### PROCESSING AND REPORTING

### REPORTING

### ARDF Recovery Report

Changes to TECHINS 3038 resulted in the utilization of different flag symbols for areas of fragged coverage in South Vietnam. Where the old system identified the flying unit only, the new system identified the area flown and did not differentiate what unit performed the flight.

### PROCESSING

### Identification Rate

By the use of expanded data base files and aids provided us by other agencies, Detachment 2 maintained a 50 to 60 percent identification rate on fixed targets. Additionally, a re-education of the manual morse operators on desirable signals and their characteristics resulted in the production of intercepted intelligence that, on almost every occasion, was identified at some level of analytical review. Continuously hampering target identification was the continuing communications change the target entities are utilizing to ensure their secrecy. On 17 August and again on 2h September this unit and specific flying personne

intercepting and fixing two very desirable Special Emphasis targets. Neither entity had been observed in communications for well over a month and due to their tactical abilities were believed to possibly be leading the attacks on a vital Allied location. Confirmation of their locations provided Allied Battle Commanders the opportunity to prepare defenses and delay further the enemy capabilities in that region. Technical Data Lists (TDL's) have not been effective in most cases for airborne identification. Reduced manning at the Collection Management Authority (CMA) has understandably resulted in poorer quality of research that could be done to enhance TDL accuracy. Inhouse generation of additional TDL information has helped greatly, allowing a better and more complete profile for the analysts to ensure prepositioning of the mission aircraft and production of desirable results.

### Analytical Personnel Manning

Detachment 2 was undermanned in Airborne Analysts until the middle of October when the arrival of five additional personnel brought us up to full strength. Since that time, four analysts have departed, leaving us again short of personnel.

This situation has not greatly hampered our operational ability but it has resulted in very little if any time off. One of the departing individuals was the A202 Standardization/Evaluation

Flight Examiner (SEEE) representative. A new SEEE was appointed

and as of 1 November has assumed the duties and responsibilities of the office.

### CMA TDY Visit

During the period 25 thru 27 July, TSgt Joseph W.

Wesner, FR and Sgt Donald N. Meadows, FR

performed a TDY trip to the Collection Management Authority (CMA)

at Phu-Bai, RVN. The major item of discussion was the Technical

Data Lists (TDL's) we were being provided. Several assurances

were made to us that a total effort to update the TDL's would be

accomplished and accuracy enhanced. To date, few of these

assurances have been met. Contingency plans and the move from

Phu-Bai to DaNang Airbase by the CMA have caused a disruption

in analysis and a further reduction in personnel which subsequently indicated CMA support was of a low priority.

# Equipment Installation

The installation of FM and UHF transmit and receive capability on which we can exchange information by secure means with our mission aircraft has enhanced the tip-off time of enemy activity to battlefield commanders. On several occasions we have received verbal feed-back of successful operations in the defense of DaNang Airbase, that were generated by our timely information.

CHAPTER IV

LOGISTICS

### MAINTENANCE

### Manning

At the beginning of this period the Detachment had 13 maintenance technicians assigned and was assisted by two technicians who were TDY to the unit for manning assistance. The number of PCS gains in this specialty started in July to outnumber the PCS losses and by mid August manning was no longer a problem. The availability of a full crew of technicians allowed the shop to comply with many long neglected reporting and inspection requirements. When four technicians were selected and assigned full time duties in the supervisory and quality control functions, it was necessary to continue working an average of 66 hours per man per week, verses the 60 hours per man per week desired by Pacific Air Force (PACAF) standard.

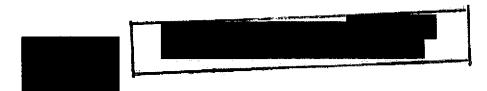

# Dual Operations (Dual Ops) Program

The Dual Ops Program, utilizing a 16,000 word computer, increased the capabilities of the AN/ALR-35 and the AN/ALR-38 by providing for an additional number of active targets. This

systems. While the Dual Ops Program performed as desired in the AN/ALR-38 system, difficulties were encountered with the AN/ALR-35 system. When this program was applied to the AN/ALR-35 system, the system would lock-up on erroneous bearings after one and one half hours of operation. The month of June and the first two weeks in July were devoted to the investigation of the cause of this malfunction by the Sanders representative and one of the Detachment's Technicians. They concluded the problem was caused by excessive demands upon the Navigational Converter by the Dual Ops Program. As a result of this investigation the Dual Ops Program was placed under investigation by Sanders Corporation to make it compatible with the AN/ALR-35.

# Noteworthy Performances

(U) Aircrafts © 37 and 3382 returned from Corrosion Control and Aircraft 8072 returned from IRAN and were uploaded and declared Operational Ready (OR), with only minor Quality Control discrepancies, after one operational check flight. The Systems Performance and Maintenance Evaluation (SPAME) program was re-implemented and included as a part of the aircraft phase inspection. This was accomplished within one week of notification of the SPAME requirement. To accomplish this required a large and successful

training effort as only two of the Detachment technicians were familiar with the program.

### TDY Assistance

(U) In mid September, Detachment 2 was tasked with providing technicians on TDY status, to assist Detachment 3, 6994 Security Squadron in both manning and training. The Detachment provided two technicians on TDY through 7 November. Starting 7 November the Detachment provided an additional four technicians to enable Detachment 3 to meet its mission objectives.

### Training

(U) In addition to the Detachments increased training requirements caused by the influx of new personnel, the 699h Security Squadron sent five and Detachment 3, 699h Security Squadron sent two maintenance technicians TDY to this unit to receive training.

### MATERIEL

# Not Operationally Ready Supply (NORS)

(U) Since 1 July the Detachment had two NORS conditions.

One of these was for a console with faulty wiring harness assembly and one for a Pre Amp. The number of NORS conditions for the year was three which was an outstanding record.

# Supply Difficulties

- (U) Although the Detachment experienced a very low NORS rate it continued to experience difficulties in obtaining many of the essential items necessary to continue operations. 6217

  The most difficulties were experienced in obtaining memory modules, data processors, computers, oscillators, circuit cards, receiver housing assemblies and power supplies. These were the same items that were difficult to obtain in the first half of this year. These items were considered critical by the Detachment because the support posture from the depot was extremely poor.

  Due to the critical shortage of many of these items, the items were coded non-repairable-this-station (NRTS), and returned to the repair activity for turn around. On 2h October, a list of the items we had experienced difficulty in receiving, was compiled and forwarded to the 699h Security Squadron. 18
  - Budget Revision
  - (U) The first revision to the Detachment's FY 73 budget was forwarded to the budget officer on 28 September. It contained a request for an increase of \$47,500.00 for supplies and equipment, of which \$44,000.00 was for supplies and \$3,500.00 for equipment. The request was based on the current rate of expenses.
  - \* See the History of Detachment 2, 6994 Security Squadron, USS-D3 for period 1 January thru 30 June 1972.

### CHAPTER V

### SUPPORT

(U) Training, Flight Operations, Standardization/ Evaluation Flight Examiner (SEFE) Section, and Security Police all continued to support the mission within their specific areas.

### TRAINING

(U) The period 1 July thru 31 December 1972 was very active for the unit Training Section. Training Section manning was arbitrary in that Training was not reflected in the UDL as an authorized and required function, despite the fact that its duties and responsibilities could not effectively be decentralized.

# Records Maintenance

(U) Records maintenance was outstanding during this period. In accordance with USAFSSM 52-2, a training evaluation was conducted by the Squadron Training NGO in July. Only a few minor discrepancies were noted, these discrepancies were critiqued and subsequently corrected.

# OJT Assistance Visits

(U) The OJT Assistance Visit, conducted every sixty days in accordance with USAFSSM 52-1, revealed each OJT Monitor's

maintenance of AF Forms 623 to be outstanding. The few discrepancies noted were corrected and explained to each minitor by members of training. Job Proficiency Guides (AF Form 797) to reflect additional duties were typed and added to all applicable individuals AF Form 623.

### WAPS Library

(U) The local WAPS Library continued to expand during this period. At the end of this period training had on hand all materials needed for SKT study, and all pertinent manuals were ordered for PFE study.

### Individual Knowledge Evaluation Test

(U) IKETS were administered in July, in accordance with USAFSSM 200-4, Vol XVI, to all operators and supervisors. All tested had passing scores. The results also reflected the knowledge of supervisors at Detachment 2 with an average score of 93 percent.

# Upgrade Training

(U) The Training Section continued to minitor the On-thejob-training (OJT) progress of all AFSCs. Through close coordination with the section OJT monitors, upgrade training results continued to be favorable. The number of trainees in each AFSC continued to fluctuate due to the constant arrival and departure of personnel in training status. 1

# Ground Training Program

- as the instruction text for Category I operators. This new manual was much more complete and in-depth than the one used before. Det 2's goal was to give new operators a more thorough knowledge of the program prior to flight training, and this goal was met with the institution of this new manual.

  Category IV Training
- (U) In an effort to improve the proficiency and knowledge of the detachment AMSs an in-depth AMS ground school was begun in October for prospective AMSs. A lesson plan was followed during the first block of instructions followed by an informal discussion period. Results were very satisfactory as four of the original class of six were recommended for upgrade to AMS.

  Instructor Radio Operator (IRO) Training
- (U) To better select IROs, an IRO school was initiated.

  This school was a screening process in an effort to identify
  the AMSs who had instructor abilities and knowledge. The course
  also attempted to instill confidence in the IRO. Results of
  the first class were very good.

United States Air Force Security Service Standardization/ Evaluation Team Visit

(U) In September, the Command SEFE Team conducted an

inspection of Detachment 2 Training Section. Results of their inspection of proficiency training administered by Training and its facilities were outstanding, these findings being cited in their inspection report.<sup>2</sup>

### FLIGHT OPERATIONS

Cn 1 July, Flight Operations reverted back to a two flight concept since a four flight system was no longer practical. When personnel were transferred to Nakhon Fhanom RTAFB, in June, the A207X1 strength was reduced to a point where effective supervision could be maintained with two flights.

# STANDARDIZATION AND EVALUATION

- (U) The Standardization/Evaluation Flight Examiner Section (SEFE) continued to review all crew members' Flight Records to insure that each aircrew member remained current in all areas of training. During this period, a total of 25h Standardization/ Evaluation examinations were administered with 30 failures. Also, there were 129 checkrides conducted with 7 failures. During this period, USAFSSM 55-7, Vol II, was replaced by USAFSSR 55-7, Vol VIII, which was immediately implemented by the SEFE section. 699h Security Squadron Standardization/Evaluation Team Visit
- (U) During the period 27-30 August, the 6994 Security
  Squadron Standardization/Evaluation Team visited the Detachment.<sup>3</sup>

Team members flew two operational missions and the overall evaluation of the Detachment SEFE Section was rated as excellent. The main items discussed were insurance that existing documents were complied with and that good administrative practices be re-emphasized.

# United States Air Force Security Service Standardization/ Evaluation Team Visit

(U) During the period 14-20 September, four members of the USAFSS Standardization/Evaluation Team visited the Detachment. In their overall rating, the Detachment was rated as outstanding. Some discrepancies were noted and were either corrected during the visit or as soon as possible after the team departed. Also, Team members flew six operational missions during the visit and overall craw performance on all missions was rated as outstanding.

### SECURITY POLICE

# Training, Indoctrination and Debriefing

(U) A training program was instituted to indoctrinate all personnel in weapons safety. Classes were to be continued on a quarterly basis. Lesson plans were also made by the SP Section to cover the classes of instruction. Also during this period approximately 175 personnel were indoctrinated and debriefed and under the re-investigation program 26 personnel's

clearance were updated.

# Improvements

(U) The incinerator was repaired, cyclone feace was configured in accordance with AFM 207-1 and USAFSSM 201-1, and temporary perimeter lights installed within the Operations Compound, to better assist the Security Police in performing his duties during the hours of darkness.

#### CHAPTER VI

#### SPECIAL INTEREST ITEMS

## Airborne Incident Report (AIR)

On 5 October, EC-47 Aircraft 3882 was fired upon from the ground, as it was returning to DaNang. 1 The crew had just completed a successful ARDF mission in the area around Pleiku RVN. The weather conditions were very bad and the Aircraft Comma<mark>n</mark>der had descended to an altitude of approximately 1,000 feet to avoid the turbelence associated with the heavy build-ups. While flying in the vicinity of Thang Bins RVN, which is approximately 20 miles south southeast of DaNang the aircraft was fired upon and three, probably small caliber rifle bullets, panetrated the fuselage. One of the bullets severed a cable that provided power to the ALR-35 console. All three bullets entered the left side of the fuselage just in front of the wing. There was no major damage to the airframe. The USAFSS crew, SMSgt Walter E. (NCOIC of Operations) and SSgt McCollough, John J. Piteruse, (NCOIC of Awards and Decorations) both of whom were second tour veterans of Detachment 2, stated that no muzzle flash or air bursts were observed. As stated before, the mission had been completed, so the crew continued

their RTB without further incident. The holes were quickly patched and the power cable was replaced and aircraft 3882 was on the ready line for another mission on 6 October.

Rocket Attacks

DaNang Airfield, more commonly referred to as "Rocket City", by the thousands of US forces stationed there, continued to live up to its famous nickname. During the last half of 1972 the airfield came under rocket attack 12 times, and received a total of 263, 122NM rockets. This, added to the 12 attacks and 177, 122NM rockets received during the first half of the year. This added up to 2h attacks and 120 rockets. There were no Detachment 2, casualties during the year. During an attack on the morning of the 25th of October, one 122NM rocket impacted approximately 50 feet northwest of the Detachment 2 operations complex. Two of the Detachments H-1 Vans were damaged by shrapnel, and the revetment structure around the supply building was extensively damaged.

### Typhoon Evacuations

(U) During this period the Detachment participated in three typhoon evacuations. Typhoon Elsie, the first of the season, appeared on the scene on 2 September and posed a threat to the facilities of Detachment 2 and the DaNang area. At 0900Z, 2 September an ECON-2\* was declared and 13
EC-47 aircraft and 46 Detachment operations personnel were
deployed to Tan Son Nhut Air Base RVN, with the full
capability of continuing airborne operations from that base.<sup>3</sup>
The storm by-passed the DaWang area and the only adverse weather
in the local area was some heavy rain and moderate winds. At
0245Z, 3 September an ECON-2 follow-up was submitted terminating
the typhocn condition. All of the aircraft and personnel returned to DaWang and resumed normal operation.

- (U) The second typhoon of the season, Typhoon Flossie was noted headed towards DaNang and ECCN-2 was declared 14 September at 1400Z. A total of 12EC-47 aircraft and 41 operations personnel were deployed to Ton San Nhut Airfield RVN. Their stay proved to be short as Typhoon Flossie changed directions shortly thereafter and posed no further threat to the DaNang area. An ECCN-2 terminating the emergency condition was issued at 0510Z on the 15th of September and all individuals and aircraft involved were returned to DaNang.
- (U) The third typhoon of the season, Typhoon Pamela, was noted headed toward DaNang and an ECON-2 was declared at 0010, 7 November. A total of 12 EC-47 aircraft and 38 Detachment 2 operations personnel were deployed to Nakhon Phanom RTAFB, Thailand. Typhoon Pamela proved to be as unpredictable as her predecessors and turned away, leaving DaNang Airfield with a \*ECON-2 (ECON) Emergency Condition (2) Adverse Weather.

wind whipped and slightly soggy feeling. No damage was sustained by USAFSS equipment or personnel, and the Airfield suffered only minor wind damage. AN ECON-2 follow-up was submitted at 0215Z, 8 November terminating the typhoon conditions. All of the aircraft and personnel returned to Dawang and resumed normal operations.

### Vietnamese Familiarization Flights at DaNang

During the early part of November, when it appeared that the Paris Peace Talks were progressing toward an early cease-fire, a decision was made to fly Army of the Republic of Vietnam (ARVN) radio operators and Vietnamese Air Force (VNAF) pilots and navigators with Detachment 2 and the 362nd TENS, in order to familiarize them with the areas flown from DaNang. A 40 day program was planned to provide enough familiarization flights to qualify them to assume responsibility for the 10 BC-47, ALR-34 systems assigned to Detachment 2. On 21 November the first 7 ARVN radio operators, from Unit 17, Special Security Technical Branch (SSTB) started flying three missions every other day with a Detachment 2 Morse Systems Operator as an advisor. As of 31 December a total of 93 familiarization flights had been flown with exceptional results. Some minor problem areas developed during the early

stages of the program but were soon overcome.

### South Vietnam Withdrawal

On 10 November 1972, Headquarters United States Security Service, issued change three to PAD 72-8. This change programmed for the relocation of Detachment 2 facilities and personnel from DaNang Airfield, RVN to Nakhon Phanom, RTAFB Thailand, where it was to be combined with the facilities of 6994 Scty Sq with all dates of actions contingent upon cease fire date. A decision was made a few day later to exchange aircraft between Detachment 2 and Detachment 3, leaving Detachment 2 with 3 ALR-35 and 3 ALR-38 Systems which were to be transferred to Ubon RTAFB, Thailand and 10 ALR-34 Systems that were to be turned over to the Vietnamese on the cease-fire date. On 30 November 1972 the first EC-47 aircraft, with a Detachment 2 back-end crew aboard, departed Dallang for Ubon. The following day the remainder of the 52 man force from Det 2 plus one officer in TDY status, departed for Ubon to establish Detachment 3, 6994 Security Squadron. Detachment 3 flew their first Operational Mission out of Ubon on 3 December 1972.\*\*

<sup>\*</sup> Detachment 3 at NKP was deactivated when 6994 Scty Sq relocated to NKP from TSN, RVN on 1 December 1972.

<sup>\*\*</sup> The History of the 699h Scty Sq, USS-D3, 1 July 1972 to 31 December 1972, should be referred to for a complete account of the establishment of Detachment 3 at Ubon.

# Continuation of the Black Bear FIX/FAC Program

The Black Bear Program, which was implemented by Detachment operations on 2 August 1971, provided for the relay of ARDF fix information to Forward Air Controllers (FAC). This program was highly successful during the first part of 1972, however, with the enemy build up and following offensive, the FACs were usually too busy directing air strikes in support of ground operations to be available to work with the ARDF crews. Detachment 2 continued to pass ARDF Fixes through to Director of Intelligence, 6498 Air Base Wing and via secure communications, after the missions recovered, but the air-to-air communications with FAC aircraft was non-existent. In early October 1972, an effort was extended toward renewing the Black Bear Program and expanding it to include Military Region I.\* Coordination between members of the 20th Tactical Air Support Squadron, the Director of Intelligence, 6498 ABWg, and Detachment 2 personnel, formulated working procedures and on 29 October 7AF gave approval for immediate implementation of the revised Black Bear Program. 7 As of 31 December the program is running very smoothly, and has proven to be very productive.

<sup>#</sup> Under the old Black Bear Program, Fixes obtained in MR-1 were passed to 20TASS Intel via AUTOSECOCOM after the mission had recovered.

APPENDIX I

BIOGRAPHICAL SKETCH

#### APPENDIX I

#### BIOGRAPHICAL SKETCH

Captain Patrick D. Rife was born in Denver Colorado, 15 November 1943. He attended school in Greeley Colorado and graduated from the University of Northern Colorado (UNC), in December 1965 with a Bachelor Degree in Education. He was commissioned as a Second Lieutenant upon graduation, after completing the Reserve Officer Training Course at UNC.

After an 18 month tour at Travis Air Force Base,
California as an Administrative Officer for the 1300 man, 602nd
Organizational Maintenance Squadron, Lt Rife applied for and
was accepted to Undergraduate Navigator Training (UNT) at
Mather Air Force Base, California. Lt Rife received his wings
as a Distinguished Graduate from Navigator Training and comtinued on at Mather for Navigator Bombardier Training (NET).
In February 1969, after completing NET, Lt Rife reported to
the Castle Air Force Base, California, Combat Crew Training
Squadron for orientation and qualification in B-52 aircraft.
Lt Rife pinned on his Captain bars, while at Castle.

Captain Rife assumed duties as a B-52G Navigator with the 60th Bombardment Squadron, 72nd Bombardment Wing, Ramey

Air Force Base, Puerto Rico in July 1969. He later assumed the duties of Wing Standboard Navigator, logging over 1000 hours in B-52Gs until he was medically grounded in January 1971.

After being grounded Captain Rife was assigned as a Maintenance Officer with the 72nd Avionics Maintenance Squadron at Ramey until SAC's deactivation there in July 1971. During his tour in Puerto Rico Captain Rife obtained a Masters Degree in Education from the Inter-American University of Puerto Rico.

In July 1971 Captain Rife was assigned as Maintenance Supervisor to the 28th Airborne Missile Maintenance Squadron (ACM-28s and AIM-20s), Ellsworth Air Force Base, South Dakota. In August of the same year he went TDY to attend the Staff Officers Maintenance Course at Chanute Air Force Base, Illinois for two months. In August 1972 Captain Rife assumed command of the 28th AMMS and served as Commander until he was reassigned to Vietnam.

Captain Rife's assignment to Detachment 2, 6994 Security Squadron, DaNang Airfield, RVN, was as Maintenance Officer; However, with the establishment of Detachment 3 at Ubon RTAFB, Thailand, and the subsequent departure of Captain William J. Shea, Captain Rife assumed command of Detachment 2 on the 16th of December 1972.

(U) On 31 August 1972, 7th Air Force (DFY) faded out of existence, being replaced by 13th Air Force (DFY). To this date we have received no response to submissions from 26 August to present. A recent TDY trip by personnel of this office revealed that 13th AF was heavily backlogged due to the changeover and were doing everything possible to remedy the situation. This office is the process of querying all awards pending for an excessive amount of time. Statistics indicate that there is an abnormal number of recommendations pending. The section also is still experiencing difficulty in obtaining required items from host base supply, Air Medals, Award Elements folders, etc. Only source to date has been thru USAFSS units, and only on a limited basis.

Plating: We arrived at the arranging billate, we windled the resorting map and we to the various supertors familiarities especially at the t and responsibilities. We again which ware introduced to the GIC a H Breen of the Airbo (ASMS) Section. While talking to the or individuals it b that they did not have a full me Man AND equipment and its sepablicate, We spent several bours gaing over these different areas with all the AND personnel and I feel that we acquainted them sufficiently with its advantages and MC-47 ARD equipment and its m disservantages, We requested and were greated deletion from the distribution of the ARDF Treffic Analysis hom (Sigh Speed has). This to me longer needed since we are authorized to earry the MSA Fixed C/S Book on beard the mission streets. Of primary discussion was the Technical Data Lists (TDL's) generated by them for use of pre-positioning our aircraft for optimum coverage of high priority targets by scheduled times. Several errors were pointed out to them in the positions of targets and the MACV priority under thick they were listed. With a joint effort between the ASSE applyets and the Exploitation Inclysts, we were able to generate a clean-up of the present TDL's and impre upon them the need for their being corrects. He were constantly a

with the term "we just don't have enough people", and I believe the manpower suts they have suffered have severely hampered the output they have afforded we. We did manage to get them to generate a message to NSA citing manpower shortages and requesting semitimation of the TDL's to reflect only Priority One and Preemptive Tasking targets with selected 2's and 3's of which continwity has lagged, thus allowing better information on a more selective basis. We were assured we would be kept informed of the outcome and efforts would be made to enhance existing Thee in the interia. Ident change reports were discussed and descrepiencies were noted in feedback items. Again, the lack of time for such detailed analysis by the existing force on hand was evident and they stated that if an identification was not immediately apparent they Be change dure to unidentified and let REA worry about it. All requests for additional analytical aids were to me avail, contingency plans included the destruction of all "extra" documents and those on hand are needed by s respective analysts. All personnel essigned to Pho-Eas are performing the jobs. They are not only required to perform their duties as analysts etc., but are also noting as perimeter quarks and fire team members. Hardly expense is compt from these additional duties and the extent to which they are working has to have a telling effect on the product which they are straking. I do believe they are duting the best with what they have lable set only the fee our to and meditional personnel will better to whetlers prepared by the Exploitation he entput. Our last day pricing analysis, and peristance to the Heathwidten analysis. We had hoped have then to learn seem of the effective analysis techniques for appealing as not found that the new or compliance working side that the new familiar with after a period against by the Deputy Operations Officer of Santition with, Affin a par wing which he effered as o the eviction unit that he could tide, up departed Marchal at appre mentally 1430 hours on 27 July 1972.

- R36/381 STAGE THE INSERTION OF THE DUAL DRS PROGRAM INTO THE COMPUTER THE MER 35 /38 SYSTEMS SOME PROBLEMS HAVE BEEN ENCOUNTERED AT BOTH ELET Z AND 3. THESE PADRIENS ARE SIMILAR IN SOME CASES BUT IN OTHERS

DIFFER DRASTIGALLY. THE METHODS LISED TO CORRECT UR COUNTER THE PROBLEMS OFFER AT EACH LOACTION. IT IS WITH THE CONFLICT IN MIND THAT WE FEEL A MEETING IS ESSENTIAL. THEREFORE, REQUEST BOTH DE-TACHMENTS AND SANDER'S TECH REP LMR, JEWITT) HAVE A GET TOGETHER TO PROVIDE ANSWERS AND/OR CORRECTIVE, ASTRONS TO THE EDILOWING QUESTIONS.

A. HAY IS THE NAV CONVERTER OVERHEATING?

B. WIEC THE BURL OPS PROGRAM WORK WITH BOTH THE MLR-35 AND -387. IF WOT. WHY?

-RE THE PROBLEMS BYIDENT WITH BOTH THE BK AND JOK MEMORIES IN THE COMPLITERS?

## PAGE 2 RIMMRSALUSA

OF WHY DOES DISCONNECTING THE NOW I NEEDLE ON THE 10 250'S AT DE NAME REDUCE THE DECURANCE OF THE PROBLEMS AT NEP IT IS SAID THAT THE SYSTEMS WORK WITH ALL TO 250%S CURRECTED PROPERLY.

E. WHY IS IT NECESSARY TO DREN THE CONSOLE BOOK IN AN ATTEMPT TO PROVIDE ADDITIONAL CODLING FOR THE NAV CONVERTER? IT SEEMS THAT BY OPENING THE DOOR THAT YOU FORCE OPERATION OF THE CONVERTER IN RELATIVELY STAGNANT (NON-FLOWING) AND TENT ALK. WORLDN'T IT BE MORE EFFICIENT TO CLOSE THE DOORS? AND PROVIDE ADDITIONAL FLOW OF COOL AIR BY ENSURING THAT THE BLOWERS ARE OPERATING PROPERLY. ELLTERS ARE CLEAN. AND OBJECTS ARE NOT STORED IN AND AROUND THE AIR INLET TO THE CONSOLE? IT IS SUGGESTED THAT IF LODITIONAL CC AIR IS NEEDED THAT A TEST HE COMBUCTED BY ADDING ADDITIONAL AIR FLOW. THIS COULD BE ACCOMPLISHED BY ADDING AN ADDITIONAL BLOWER MOTOR OR FAN ADJACENT TO THE COOLING FINS ON THE NAV CON-VERTER.

2. ONCE A SATISPACTORY OUTLINE RETTRING THE PROBLEMS WITH THE DUAL OPS PROGRAM IS ESTABLISHED A UMR (1.0. 00-350-54) SHOULD BE SUB-MITTED THROUGH HERE (6994 MA) TO THE PROPER AUTHORITY. THIS UMR SHOULD CONTAIN SUFFICIENT DETAILS TO DEFINE THE PRIBLEM AND YOUR

PAGE 3 RUMMRSA1854

JOINTLY AGREED UPON RECOMMETERS CORRECTIVE ACTION. IN ADDICTION TO THE UMR SHAMITTED AS DIRECTED REQUEST YOU PRO-VIDE THIS DEFICE WITH ANSWERSS TO EACH OF THE QUESTIONS POSED IN PARA I A THRU C ABOVE, ALSO PROVIDE A TIME DATE, AND PLACE FUR THE MEETING. IGDS DATE: DECLASSIEY 31 DEC 181.

# 5. Det 2, Da Nang Findings:

- a. 28 Aug Migt Cebble flow a special re-certification mission in area 908A with Sigt Robinson as AMS and Tigt Schoonover as A202 unit Sigt. Tigt Schoonover performed cutatentingly other than he and some of the other back-end crew did not wear their names gloves until the aircraft started to taxi. Some thing cocurred after leaving the active runway on landing. Other than that this was an exceptional mission with a highly motivated fronteend and back-end crew.
  - b. 26 Amy . That Presiew flow a mission with no discrepancies noted.
- 4. 29 Amg The Sten/Svel oritique was held by MSgt Cobble and TSgt Printer, with TSgt Lare sheets, from 1600 to 1730 hours. Following items were discussed with Capt Mass, Capt Magner, and TSgt Luther:
- (1) The subject was brought up about wearing nounce gloves from expine start metal alreades, and desing landing until engine statedown. The lather said that her I describe stated "prior to take-off or landing" and further whichel he could not see the necessity for matching of flower at other these. Mile was displaced by all with no first agreement but no respect.
- (2) There you takenes in the mas of checklists on my mission.

  I empressed additional emphasis be placed on this.
- (1) The CENT Class should be up-deted or the information incomparated into regulations, Division SEC. 4.
- (i) Some USF and Filipit Safety cards had not been signed off and people had flows sides. In Mine with this Mist Cothle recommended that a separate eard file for CIF and FEE he maintained in lies of the present method at stepling a best to the "Report card. Often only the Here eard in filed or only the CEP/FEE eard is filed can be steples easing out, getting term att, oter. Since the CEP/FEE ours does not have a mass on it only intitle; it because retire difficult to keep track of the cards when apparated.
- (3) And the police on 28 may did not ecopily with CIF 72-72 which control that the ASS would note a physical check of individual items prior to the That brieflags. We later assempliated this at the local brieflags.
- (6) The GPT reserves should contain now or up-dated Form 797's (continuation should standard furnish. After talking with the equation GPT common on 5 Map, it was determined that it is up to the determined to require the property their form 797's, since they have different tests.

- (7) Observed, which was already known by all, that TS Codeword material is secured only by a scubination padlock in both the Training room and the Briefing room.
- (8) A review of Squadron and Detachment regulations might be in order, since Squadron Reg 55-18, 3 Mar 1971 was still in book yet was supermeded by Reg 55-5, 23 May 1972. Also Det 2 Reg 60-1, persgraph 2 states send of calcadar quarter" rather than "first month of each calcadar quarter" as per USAFSIM 55-7, Vel II, Chapter 6, paragraph 6-4. Notes Squadron Reg 60-3 mistes "at least once each calcadar quarter." This was pertaining to the Quarterly Stan/Eval Review Panel.
- (9) Correct system/procedure for show times/brieflings. Present procedure is for the eres to meet in front of the barracks, welk to the sometimed intelligence brief room, go to coffee/PE shop, then ride to other side of base. The barboard cross goes to operations while the front-end cross goes on to the aircreaft. The BO's/Analyst than have beenly minutes to check the bag, key settings, strend local briefing, plak up 16's and walk to the aircraft. This was discussed in great detail by all present walk to the aircraft. This was discussed in great detail by all present with the only commissions being that the present procedure leaves a let to be desired and that the UNAPS Stan/Sval team will probably agree. Notes The primary receives for the present procedures are the lack of vehicles and the fact that the contined brieflings are only speeduled on the best dust the Genney ground.
- d. Overall results of the Star/Seal visit indicate that Det 2 is in protty good shape. They need only to inners complishes with existing documents and re-emphasiss good emistature tire practices.
- 6. Det 3, Balan Pleasen, that Plantage
- From the time the assignment medical the AC to RTS until terrelation and approximately one hour and five minutes, yet all back-and even members stapped working immediately on hearing with.
- the 2 Sep Migt Coulde mortgisted to fly with Migt Mark as Arth, interest, ten selection before tenent time the alrest to a country of all series, being the bring flows was the least productive of all series, bring Neet and Country Section for by Cly.
- on 2 Sep 15gt same was short to fly but was placed on section build and released three bours after sheet MD.
- de l Dep Des Steme/Fred erdadens was held by Migt Cobbie, Thet President, and Tigh Asso from 1660 a 1770 hours. Pollanding from were discussed of the Coph Collect, Coph March, Migt Mass, and Tigh Schoolfield

- (1) TSgt Premier's mission concerning not working while RTB. There are existing instructions which say work from power on until power off.

  More emphasis will be placed on this.
- (2) Some CIF and Flight Safety cards had not been signed off and individuals had flown since. The card file was neat and well maintained. The Flying Safety Information Folder was outstanding.
- (3) An existing Operating Instruction states the CIF's will contain an experation date, yet most do not.
  - (h) The charte in the unit Stan/Eval office are outstanding.
- Form 7h (Airborne Operator Flight Check), yet is required by USAFSSM 55-7, Yol II. I talked with Sigt Salatary (A)28 SEFE) who said he has been doing it since Tigt Schoolike pointed it out to him. My impression is that Sigt Salatary has lost soutrol (backing) as A328 SEFE. This appears due to inchouse problems. Note: This is the only unit of the 6994th that has the A328 Sign filed with the rest of the A202, A203, A207, and observer 846's in a control losstion. This is a very good idea.
- (6) Currently ten A300's are authorised on status, yet sixteen are actually on figing status. Sept Solden said that SESET Dacker was purished on furtification to try and get more alots authorized. I told him he might get "barned" and likewise Squadron for being ever 100%. Notes USAFSS Supplement to AFM 16-61 says that AFMPC grants USAFSS saiver for more than 100% on status in operational AFSC's if used only in special eigenmentances (1.00 temperaty realignment in unit's mission).
- (7) On chasting the Sid's, some had Confidential sever sheets, yet sentained Confidential Event material inside. This was corrected the same day by Thyt Schoolids.
- (8) All straight Confidential Form 74's should have descripteds instructions. The Debeckel has been doing this since the new CDS 31 Dec 1978 same into being. I questioned fearibility of placing new descripted instructions on the older Form 74's.
- (9) CEF 59-7h states that the AME will request an analyst briefing if we analyst is sted to fly. This was not done on I Sep by SEgt Corders, AME; may was a full physical check of personal items made. LAW URAPSEM 55-7 Vol II and 699kth Sety by Reg 55-1, analyst briefing should be entenationed on o CEF should be required.
- (10) A GIT was cut which is part said that after initial coun check the ET-5 week be separated. I pointed out that the ET-5 when keyed was only Cat I, and as Schrod Codescon/Hipped as stated in the outrons "History of ANDY," which is make or like tend on an A207 training guide. Therefore, it is not assessment to meridan that hearts on an un-closed marigator is should

- (11) The AMS briefing guide was outstanding. TSgt Proplar xeroxed a copy for squadron, and we will consider adopting this briefing format squadron wide.
  - (12) Following were recommendations by myself only:
- (a) Analysis and Reporting Section: Recommend no frozen shifts, but instead rotating shifts, with minimum of two people on mids, with one of them making up the supplemental TRL's. MSgt Mack would then get to know each individual personally during that person's tour of days. Likewise he would have more control and be better able to svaluate all of his people. Each analyst would be more diversified.
- (b) Suggest Det 2 provide (vin OPSCOM) supplemental TDL's en missions flown from MCF in Da Nava mission areas.
- (c) De Many has small attache cases which contain all A202 material. I believe this would be a good idea to scopt squadron wide, especially in view of the current navigator situation. If at the last minute an uncleared savigator flys, the A202 would simply return his attache case to local operations, and the remaining information contained in the mission bag would not contain Cat II material. This would mean that supplemental This placed in the mission bag would be the samitized versions, yet on missions shed to fly with an analyst, the analyst's attache case would contain the identifications for the supplementals plus whatever additional information the analyst deemed appropriate IAV existing reg's, pelicies, etc., insuring that as much material as possible is on water soluble paper and so Codeward appears anythers.
- (d) Perhaps a 2-3 day meminer at TSN or MEP with the 3 Analysis and Reporting MCCIC's plus other interested parties attending would be beneficial to all. The primary goal would be standardisation of procedures for all three units as much as possible.
- (13) Following were items dept Golden wanted me to relay or impulse about:
- (a) 7AF said they had destroyed all navigator 398 packages, yet the 360th This forwarded one package to an MC marigator. Capt Golden wondered if partiages the 360th had other 398 packages for MCP savigators. Will shock on this.
- (b) Weed a "rubber stamp" approval to free missions to aid in SaR effort. We for Watte is coordinating with Capt Snodgress on this and should be no problem.
- (a) Wanted relayed to Major Wolts that the Dat has a patch
- (d) Wented vehicle situation mentioned again. Last month four obsolets vehicles put on 5,075 miles. All 65 or 66 models. Information relayed.

- (a) Wanted Squadron to consider publishing instructions to mean the vest and harmes throughout the mission. Information passed on.
- (?) Local maintenance had asked Capt Golden if there would be any additional support/squipment requirements needed to support the "304" aircraft that is enroute NEP from the states at this time. This question has been put to Major Watts.
- (g) Capt Golden wanted to know exactly what is required for TDY personnel to have in their possession when they wish to fly missions at the unit they are visiting. (10:2's and etc).
- e. Overall results of the Stan/Sval visit showed Det 3 had only minur discrepancies which should be corrected.

SIGNED

JAMES P COERER, Migt, USAF Squadron A202 SEFE Cy to: Det 2, 6994th Scty 8q/00 Det 3, 6994th Scty Sq/00

### 4. Unit Evaluation

a. (U) Stand/Eval: The management and effectiveness of the unit's Stand/Eval section has definitely declined since the last PACSCTYRGN visit. Even though some portions of the program remain excellent there are areas/practices that require immediate attention and corrective action. The specific areas are treated separately in the following

sub-paragraphs. It should be pointed out that the total content of every AF Form 846 in the unit was thoroughly inspected:

(1) (V) Records Maintenance: Denorally, maintenance of the 846's was good. Required data was filed in the appropriate sections and was neat. Only four minor discrepancies were noted where individual orders for aircrewmenter badges were not filed. Another records maintenance discrepancy concerns the filing of AF Form 1042. Only the most current 10.2 need be kept on file. When a new form is received from the flight surgeon the preceding one should be emoved from the records. Individual flight time records PIN 221104, are not maintained in section V of a Form 846 Tan the instructions in USAFSSM 55-7, Vol. 11, page 7-2e. Unit should confid with this requirement or request a valver.

#### (2) Form 74 Review:

- Jun 72 a number of discrepancies were noted on the Form 74 in narrative form, however, none of the areas in parts I-VIII were marked as conditionally qualified. One of the major areas written up was operator coordination with the navigator. Even though discrepancies were noted, the examiner recommended immediate entry into the AMS training program for the examinee. On 22 Jul 72, this same individual was up-graded to AMS even though discrepancies noted were repeats from his initial Category III check flight. At this time the examiner recommended upgrade to IEC after no more than ten additional missions. The individual has flown thirty missions since this final recommendation was made and no follow up action has been taken for upgrade to IEC.
- (b) (U) An individual was administered an AMS upgrade check flight on 17 Jul 72 resulting in failure. In this instance the examiner recommended a recheck after the individual had flown no more than five additional flights. This is contrary to USAFSSM 55-7, table 4-1, rule 4, which states the re beck will be given after no more than three additional flights. Additionally, this initial check flight was conducted after the examinee had failed the written exam. Failure of the written exam negates the requirement for a flight check per 6994th Reg 60-3. To date there has been no follow-up action of

this failure by the Stan/Eval section.

- exam on 3 Aug 72. The failure was posted to the form 942, however, there is no form 74 on file to snow results of this check flight. A form 74 dated 23 Aug 72 is on file which states the individual concerned failed to report for his written exam as required following the no notice check flight.
- (d) (U) One of the unit trainess in AFSC A207XX was found to be overdue for his initial check flight. USAFSSM 55-7, table 4-1, rule 2 requires this check flight no later than the 15th mission. The individual concerned flew his 22nd mission on 13 Sep 72. There is no waiver request or follow-up action on file and only two student evaluations (6994th SS Form 1) are on file, one for the first and thirteenth mission. 6994th Rep 50-4 requires a student evaluation for each training massion.
- (e) One A202XI was evaluated on the use of all comm systems during his initial Cat III check flight. On subsequent check flights, Part IV of the form 74 covering comm systems was marked non applicable. 6994 Reg 55-3 requires all A202XI personnel to be knowledgeable in aircraft comm systems.
- (f) Flight examiners for AF.C A203XX are not consistent in completing part V, DF and comm systems, of USAFSS Form 74. One examiner administered three examinations to the same individual and in each case part V of the form 74 was filled out differently. This procedure should be standardized throughout the 6994th complex.

#### (3) No Notice Examinations:

(a) (U) From 1 Jan 72 - 17 Sep 72 a total of 42 no notice examinations were conducted for all operational AFSC's.
Twenty two of these examinations were conducted to meet normal semi-annual requirements. The total number of no notice exams is exceptionally low with a disproportionate number being semi-annual exams. More emphasis should be placed on conducting no notice exams to spot marginally proficient operators.

(b) (U) It was also noted that no notice examinations were being used to upgrade personnel to ANS and instructor status. Upgrade exams of this type are something the individual should be notified of in advance to allow for preparation. Upgrade no notice exams should not be used to meet no notice requirements of USAFSS 55-7.

# (L) : Category III Examinations:

- (a) (U) The 846's of all Category 111 personnel were reviewed for compliance with USAFSSM 5'-7, table 4-1, rule 2. Those in AFSC A200XX and A203XX had been administered on a timely basis.
- (b) (U) For the A207XX personnel it was found that a number of exams had been administered late. Of the 32 records checked 18 initial examinations were late. Only one of these had been approved by waiver from Hq USAFSS. In one instance an individual check flight was recorded on 9 Feb 72 and other source records indicated the individual did not fly on this date.

### (5) Testing: (U)

The overall testing program is adequate in so far as subject matter is concerned. Several minor discrepancies were noted and apply to all tests and mater question files for operations AFSC s.

- (a) All test questions should be cross referenced to show placement in the master question file.
- (b) All questions in the master question file should show a source reference. This reference should show document title, page and paragraph whenever possible.
- (c) Each test should be dated. This procedure verifies test review and revision and insures against the use of outdated tests.
- (d) At present it is possible for an individual to be administered the same test more than once. Master question files should be expanded and a sufficient number of tests written to preclude this possibility.

- (6) (U) Failed Evaluations: USAFSSR 60-1 states a requirement for the unit commander to review any unsatisfactory rating and act to retain or remove the air crewmenter from flying status. There were no indications that this requirement is being fulfilled.
- b. Training: The unit has an excellent overall training program and it has been adapted to the new 6994th ARDF training manual. All operational personnel assigned to the unit go through the ground portion of the training before they are moved to specialized (AFSC) training. All A207 specialized ground training is covered very well in the course. When the student completes the course he is entered into training with an airborne IRO. The to the overall excellence of the A207 training course, it will not be discussed further. Specialized ground and airborne training for A202 and A203 personnel is discussed below.

#### (1) A 202 Ground Training:

- (a) (U) All incoming flying personnel are entered into the unit joint ground training. This training covers initial orientations, aircraft and equipment familiarization, emergency procedures, proper logging procedures and other crew duties. After successful completion of the joint ground training the airborne analysts are assigned to the NCOIC of A202 ground training, who conducts all phases of the formal classroom training. In conjunction with that training, the students are assigned ground duties to become proficient in all analytical functions. With the completion of the ground training, and after passing the Cat III test, the students are entered into Cat III training with an Instructor Analyst (IA).
- (b) (U) All portions of the training program are documented with detailed lesson plans of all instruction. The end of course tests cover the mecessary material and should disclose any weak areas of the individual's job knowledge.
- (c) To insure that the information presented remains current and valid the following recommendations are presented.
- 1 Outdated titles such as SRO (which was replaced by AMS should not be used in the training program.
- 2 (U) The term Flight Mechanic's compartment should be eliminated and the position referred to as the "analyst

position" as it is identified in the T.O. 1c-47(E)N-1.

Course material still shows the "Q" (jammer) positions abound some aircraft.

4 The USAFSSR 55-18 (AIR) being used in the course is not current.

(d) (U) The recommendation in the January 1972 PACSCTIRGN Stan/Eval report that ground training contain practice problems, hypothetical analysis situations and short written and/or verbal quizes (Ref para 4c(4)(c) in subj report) remains valid.

# (2) (U) A202 Category III Upgrade Training:

- (a) An excellent IA checklist and training outline has been developed to standardize airborne analyst training. The 6994th Form 1, student evaluations are maintained on airborne analysts that are in a training status. However, at the present time there are no analysts in Cat III training and consequently no forms are available for evaluation. It will be a point of interest for discussion at the squadron. It will be recommended that all student evaluation forms remain in the training folder until that individual departs PCS. This would allow the training section to maintain training continuity on individual training as well as training procedures.
- (b) Det 2, 6994SS SOI 50-3, dated 1 Apr 71, pertaining to maintenace of the Squadron Student Eval Form 1 covers only IRO's and not IA's. The Squadron Reg 50-4, dated 20 Apr 72 covers both IRO's and IA's. Suggest the Det SOI be reaccomplished to comply with the squadron reg.

### (3) A203 Specialized Training:

- (a) (U) There has been no A203 input to the unit since January 72; therefore, there has been no tangible opportunity to evaluate the effectiveness of the training material. Unit actions to correct deficiencies noted by the previous Stan/Eval visit are:
  - 1 (U) The newly assigned A203 will undergo the entire

Category II general training course before being released to the Voice Processing section for specialized training. The concept is fully supported by the USAFSS Stan/Eval team.

2 A203 specialized training lession plans were finalized to include all areas listed in the training outline.

multi-channel, were reviewed and transcripts prepared. However, the to the NA/Viet Cong offensive in April/May the material was destroyed. Several tapes have since been selected for training purposes but no effort to prepare master transcripts have been made. A possible deterrent is the fact that the voice processing section currently does not have the capability for duping tapes; however, no real evidence to attain this capability could be found.

4 (U) The NCOIC Voice Processing section is required to review the training package on a quarterly basis to ensure continuity.

which covers hand logging and P&R responsibilities as well as limited technical aspects of the A203's airborne job performance requirements.

(b) Although the unit actions since the previous S/E visit have undoubtedly enhanced the effectiveness of the program, there remains considerable room for improvement. It is suggested that the following recommendations be considered and appropriate action initiated so that the A203 specialized training program adquately prepares the individual for airborns as well as ground duties.

The current training outline is almost totally concerned with ground processing and reporting responsibilities (EMR, SEATS, etc) of the A203, with refresher emergency procedures and a limited vocabulary review. We strongly recommend the training outline be expanded and lession plans accomplished which train the student in those aspects of the A203's job which will allow him to function as an aircrew member. Although the student should have gained a general knowledge of target country operations during ALK and AZK, this is the time to teach him the specifics of those targets within Det2's area of responsibility as well as targets which might be encountered on a non-recurring basis to include GDRS, AAA, spotter, SAM, tank, and tactical

as well as the more basic digital communications.

2 Select appropriate training tapes consisting of a variety of activity types and prepare master transcripts.

Discuss collection philosphy in relation to mission tasking.

Develop a more comprehensive ground test to include handlegging which measures the student ability to recognize and handle the various activity types likely to be encountered by the Det 2 A203.

lent Cat III IRO checklist has been developed; however, the S/E Cat III ground test is primarly aimed at measuring the individuals knowledge of ground processing and reporting. Although it is realized that P&R is an integral part of the 4203's job at this unit, the category grading system as outlined in USAFSSM 55-7 should be a measure of the individuals knowledge in the performance of his duties as an aircrew member rather than his knowledge of BAR and SEATS reporting. Although there are no objections to P&R questions on the test, we feel that considerably more emphasis must be placed on those duties which an A203 must perform while aboard the mission aircraft.

# c. Mission Procedures/Performance:

- (1) Generally, the pre-mission technical briefings were good. Analysts presented all relevant target and E and E data. The only exception was the Briefing for mission 907AA flown on 19 Sep. In this instance the information presented by the analyst conflicted with the information the AMS had earlier been given. Target priorities were in conflict as well as the date of the last mission flown into the 7A area. AMS personnel always checked each cremember for required items.
- generally unsatisfactory. The AMS and crew attend this briefing before going to operations and therefore are unable to accurately brief the TEWS crew on any of the topics required by USAFSSM 55-7, Vol II and Det 2 6994th SS Operations SOI 55-14, Flight Mission Briefing. These topics include results of the previous day's missions, number of priorities for today's mission, and correlation of target location to the flight plan. We recommend the unit resolve this non-conformance

to directives in one of two ways. First, the USAFSS aircrew can drive to Operations for the technical briefing prior to attending the joint briefing. A second alternative is to have a duty analyst from Operations drive to 362 TEWS and present the briefing.

- (3) (U) Pre-flight procedures were good. No discrepancies.
- (4) Overall mission performance on all missions were excellent. There was excellent coordination among operators and with the TEWS navigator. Airborne analysts were outstanding and AMS personnel exercised excellent crew control.
- (5) (U) Post-mission procedures were excellent and conformed to current directives.

#### d. Miscellaneous:

- (1) (U) Det 2 6994th SS had an excess of A203 personnel on flying status from 8 Jul 17 Sep 72. USAFSS DOR Msg 042231Z Feb 72 outlined USAFMPC policy as stated in AFM 35-13, 2 Aug 72 and strictly prohibited commanders from placing on flying status more than the number "A" prefix UDL authorizations by AFSC. The only exceptions were for temporary mission changes/realignments for which the unit UDL was considered incongruous and inadequate. The message outlined procedures whereby waiver requests to exceed total UDL authorizations by AFSC would be submitted to USAFSS/DOR with appropriate justification. The unit Stan/Eval section holds the only copy of AFM 35-13 and USAFSS Supplements thereto but apparently did not identify the non-compliance. The team found no evidence of waiver submission. The unit must take immedate action to preclude a recurrence of this nature.
- (2) The Det 2 A203 SEFE who also served as the squadron A203 SEFE has departed PCS. Sgt Melton who has assumed the Detachment A203 SEFE function is due an evaluation on 20 Sep 72. Recommend the squadron SEFE, Sgt McGee, Det 3, be sent TDY to complete the evaluation.
- (3) (0) 6994SS Form 9 "Aircrew Mission Data Card" is accomplished by each individual on flying status. In addition to the usual rank, name, and serial number, the card contains enough spaces to log 35 flights by date, acft number, and flight duration. It is the individual's responsibility to make the appropriate entry on the card after each flight. Stapled to these cards are blank 5x8 cards on which the individual records the date, CIF/FSB number, and his initials

certifying that he has read these items, when the "Here" card is filled it is then the individual's responsibility to transfer the card to the Awards and Decorations section. In the majority of cases these cards are frayed and torn and on at least one card the name could not be distinguised. In some cases the 5x8 cards have been filled on both sides and the individual has begun entering CIF/FSB items on the back of the "Hero" car. Although no specific course of action is being recommended it is suggested that the unit improve upon existing procedures. This was also an item of interest in the 6994th Stan/Eval visit to Det 2 on 9 Sep 72.

- (4) We conducted a thorough review of all pertinent regulations and operating instructions. The review disclosed that there are many out dated documents on hard, as well as many conflicting publications, and a number of publications directive in nature, of which the majority of the flying personel are not aware. There are some directed actions that are not being accomplished. Some specific examples are presented in the following paragraphs.
- Quality Control Program. This operating instruction thomoughly documents procedures for maintaining a high standard of airborne operators proficiency. The unit mission management section (DOM) is the focal point for daily feedback provided by Analysis & Reporting (DORF) and Airborne Voice Processing and Reporting (DORE) sections. However, a check of all QC files indicates DORF provided no feedback data between 17 July and 12 Sep 72, and DORE has provided no data since 27 Aug 72. Additionally, there is no requirement to pass any of this QC feedback to unit Stan/Bval so that they can better isolate marginally proficient operators and evaluate these personnel on a no notice basis.
- (b) Det 2 6994 SOI 55-31, 1 Apr 71, states the requirement for each mission to carry a sealed envelope with the alternate DSV callsigns and frequency. The envelope is to be opened and that information used if the broadcast of the code words JUNICR ERRAND is heard. Two AMS's were queried concerning this procedure and only one of them was aware of the JUNICR ERRAND Procedure. Recommend all AMS's be refamiliarized on this item.
- (c) (U) 6994th Reg 20-1, 11 Jun 70, Job Continuity Folder, establishes a program "to accelerate the duty indoctrination of newly assigned personnel, to outline duties, responsibilities, and status of pending projects". The three folders checked (Ops Officer,

NCOIC Voice Processing and Reporting, and NCOIC Stan/Eval, were certified as current during September, but contained outdated and incomplete information. For instance the unit S/E section maintains all pertinent directives (USAF, USAFS, Squadron, Det Regulations, Manuals, and Operating Instructions) in its continuity folder. Although the folder has been certified as current by the NCOIC Stan/Eval as recently as 12 Sep 72, two rescinded Det 2 6994 Regs are still retained in the folder. Additionally, the section does not hold SOI 11-2, 24 Jan 72, Crew Information file, for which it is the OPR. Recommend these folders be updated as soon as possible.

- The voice processing section does not have a directive nor does there appear to be a standard procedure for acceptance/rejection of those R/T handlogs which are or are not sufficiently accurate to be issued via EMR or SEATS without further processing. The general procedure is to issue the reports directly from the handlog if it appears neat or if the duty \$203 recognizes the Op sign and in his opinion the operator is capable of producing accurate handlogs. In a great many cases this procedure is probably acceptable; however, even the most proficient operator cannot always maintain bandlogs which are accurate enough to comletely preclude transcription. We suggest the establishment of a procedure whereby the airborne intercept operator appropriately annotates his handlegs and the real jackt if, in his opinion, the handlogs are sufficient quality to preclude transcription prior to EMR/SEATS reporting. If the intercepted traffic contains no such annotation it should be fully transcribed. In addition to the semi-annual airborne evaluations, we recommend the immediate implementation of a squadron quality control program which effectively measures the accuracy of airborne handlogs on a centinuing basis.
- (e) The unit states they have no directive which tasks them to transcribe intercapted voice communications. Additionally, they have no tasking which requires them to forward the magnetic tapes containing voice intercept except a local operating instruction. Recommend the parent squadron confirm this situation or coordinate with the appropriate agency to insure such tasking, if any, is reissued.

# 5. (U) Follow - Un Requirements:

- a. The initial follow-up report all be forwarded to the Hq USAFSS/DOR info PACSCTYRGN/DOR Nift 5 Oct 72 and subsequent follow-up reporting monthly until all actions are terminated.
  - (1) Paragraph 4a (1) Suspense: 1st Follow-up
  - (2) Paragraph (a) (2) (a) Suspense: 1st Follow-up
  - (3) ense: 27 Sep 72
  - (A) Parametric States Suspense: Within 7 days of

### individuals First Duty Day.
